The human NR4 amino acid sequence was deduced from a composite DNA sequence (AAT66165) derived from bone marrow cDNA clones. Recombinant NR4, or fusion proteins including NR4, can be produced in transformed host cells. The receptor molecules and their components are useful in the development of a range of agonists, antagonists, therapeutics and diagnostic reagents based on ligand interaction with its receptor, esp. for the development of cpds. capable of modulating the activity of IL-13 and related cytokines such as interleukin-4 for the treatment of allergy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rosenthal A,
Lichtner R,
                                                                                                                                                                                                                                                                                                                                        organic molecule, particularly having a molecular weight below 5000, especially 300, that binds to the pancreatic DNA, an aptamer or (monoclonal) antibody, preferably human or humanized, that binds to the pancreatic DNA, or an anti-idiotypic antibody raised against the monoclonal antibody, any of which may be derivatized with a reporter group, cytotoxic compound, immunostimulant and/or radioisotope. The nove human pancreatic proteins and their encoding DNA have cytostatic activity. The novel sequences are useful for inhibiting transcription and/or expression of genes and proteins associated with pancreatic cancer. This sequence represents one of the novel human pancreatic proteins of the invention. Note: This sequence is not shown in the specification, it has been electronically downloaded from a DVD-rom provided with this specification by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pancreas and its encoded protein. The invention further comprises: proteins and peptides, preferably isolated, that contain a sequence encoded by the novel nucleic acid, and methods for diagnosis and treatment of pancreatic cancer, using a substance that inhibits or binds to the protein or its DNA, including: an antisense oligonucleotide, short interfering RNA or ribozyme directed against the pancreatic protein, an interfering RNA or ribozyme directed against the pancreatic protein, and interfering RNA or ribozyme directed against the pancreatic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid differentially expressed use as diagnostic agents and in screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                         This sequence represents interleukin-13 (IL-13) alpha receptor. The cinvention relates to new purified peptides comprising 380 or 427 amino acid sequences, which are receptors for interleukin-13 (IL-13); the 380 cm 427 aa proteins are designated IL-13R beta and alpha respectively. The IL-13R beta has high affinity for IL-13R beta and alpha respectively. The IL-13R beta has high affinity when associated with the IL-4 receptor. Nucleic acids encoding IL-13R beta and alpha are used as diagnostic probes to identify aberrant synthesis or genetic anomalies of heterozygosity and rearrangements, or chromosomal anomalies. They are also used for production of recombinant IL-13R beta and alpha which can be used as IL-13 antagonists, specifically to regulate IL-13-induced responses for treatment of inflammation and callergy. Il-13 receptors are also useful as antisense molecules for gene therapy (blocking synthesis of IL-13R). Antibodies are used (in standard inmunoassays) to diagnose disease associated with abnormal expression of Overproduction of IL-13R. Cells that express IL-13R at the surface are used to identify ligands and modulators of IL-13R

Antibodies raised against the polypeptide are useful for detecting IL-13 and IL-4 receptor or parts of them which have been shed from cells as a result of disease, e.g. cancer, leukaemia, atopy, atopic dermatitis, allergies, rhinitis, eczema, asthma, lupus erythematosus, AIDS, thyroiditis, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, inflammatory bowel disease, glomerulonephritis, ulcerative colitis, Crohn's disease, Sjogren's syndrome and toxoplasmosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a protein capable of binding human interleukin-13 (IL-13) and/or human interleukin-4 (IL-4) in the presence of IL-4 receptor alpha. It was deduced from cDNA (see AAA88907) isolated from a human activated tonsilar cDNA library. This IL-13 receptor alpha-1 polypeptide can be used to inhibit IL-13 or IL-4 induced IgE synthesis in B cells, useful in the treatment of diseases in which IgE or Th2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polypeptide capable of binding interleukin-13 or interleukin-4 useful for treating atopy, atopic dermatitis, allergies, rhinitis, eczema, asthma or AIDS.

                                                                                                                                                                                                                                                                        The invention relates to polypeptides capable of binding human interleukin (IL)-13 and/or IL-4 in the presence of IL-4 Ralpha. The invention also relates to a method of treatment of a disease in which IL13 and IL4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatritis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ] eczema;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                        antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective deficiency of IgG subclasses, immunodeficiency with hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's lymphoma, intermediate lymphoma, follicular lymphoma, type II lymphoma, intermediate lymphoma, follicular lymphoma, type II lymphoma, intermediate lymphoma, follicular lymphoma, type II lymphoma, transiently, rheumatoid architis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis or anaemia for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and graveniar of theraparitically useful in twan are useful in the development
                                                                                                                                                                                                                                                                                                                                                                  New PRO polypeptide, useful for diagnosing and treating a B cell related disorder, e.g. Burkitt's lymphoma, rheumatoid arthritis, autoimmung mediated hemolytic anemia, myasthenia gravis or ankylosing spondylitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunosuppressive; Cytostatic; Antiarthritic; Antirheumatic; Antianemic; Antiallergic; Muscular; Neuroprotective; Nephrotropic; Antiinflammatory; Gene Therapy; PRO; B cell related disorder; cancer; immune-mediated inflammatory disease; human.
                                                                                                                                                                                                                                                            The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide
                                                                                                                                                                                                                                                                           The present invention relates to PRO proteins and their coding so
The PRO proteins are useful for diagnosing and treating a B cell

The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

N-PSDB; ADN02574.

New isolated nucleic acid molecule encoding a polypeptide capable of binding human IL-13 and/or binding human IL-4, useful in medicine, in diagnostics or for producing antibodies.

Claim 1; SEQ ID NO 9; 24pp; English.

The invention relates to an isolated nucleic acid molecule (ADN62574), which encodes the mature form of a polypeptide capable of binding human IL-13 (interleukin 13, a cytokine) and/or binding human IL-4 (designated IL-13 receptor alpha 1 subunit) appearing as ADN62575. Also included are vector comprising the nucleic acid molecule and a host cell comprising the vector. The nucleic acids are useful as probes or primers or in the analysis of allelic variation. The polypeptides are useful for binding human IL-13 and/or binding human IL-4 and act as inhibitors by interfering with the interaction between human IL-13 or IL-4 and their natural receptors. They can also be used in medicine, e.g. for treatment of diseases such as atopy, atopic dermatitis, allergy, rihinitis, eczema, asthma, AIDS, cancer, inflammatory disease (e.g. rheumatoid arthritis and inflammatory bowel disease), multiple sclerosis, Alzheimer's disease, crohn's disease, byogran's syndrome, glomerulonephritis, ulcerative colitis, crohn's disease, buberculosis, malaria and leichmaniasis. They can also be used for producing antibodies, which can be used for diagnosing diseases. The present sequence represents IL-13 receptor alpha 1 subunit.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides: expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human tumour-associated antigenic target (T polypeptides, and their related nucleic acids. The TAT polypeptides overexpressed in cancer tissues compared normal tissues, and may serve as effective targets for the diagnosis and treatment of cancer mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and
                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian

New nucleic acid molecules encoding polypeptides capable of binding interleukin-4 and interleukin-13, useful for diagnosing and/or treating asthma, lupus, Grave's disease, hepatic fibrosis, HIV infection, cancer

Claim 1; ID NO 3; 35pp; English.

The invention relates to a novel nucleic acid molecule encoding a polypeptide. The fusion polypeptide consists (R1)x-(R2)y-F, where F 231 and 24-231 of a fully defined sequence of 231 amino acids (AEC31472), which sequences may comprise 1-10 modifications, R2 is fully defined sequence of 427 or 380 bp (AEC31473+AEC31474), which sequences may comprise one to three modifications, F is a fusion component, and x and y are each independently a positive integer 1. 1 is a multimerizing component, a serum protein, or a molecule capable where the multimerizing component fusion R1 is 1 Ø The e of

The protein has a use in gene therapy, and acts as an interleukin-antagonist. The methods and compositions of the invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of IL-4 and/or IL-13, such as asthma, atopic dermatitis, lupus, nephritis, Grave's disease, hepatic fibrosis, HIV infection, ulcerative colitis, cancer, and viral, parasitic, bacterial and fungal infections. The present sequence represents human IL-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunoglobulin-derived domain, a cleavable region (C-region), an amino acid sequence between 1-500 amino acids in length, optionally comprising at least one cysteine residue, a leucine zipper, a helix loop motif, or a coil-coil motif. The immunoglobulin-derived domain is the Fc domain of 19G or the heavy chain of 19G. A fusion protein of the invention has antiasthmatic, antiallergic, heavy collision is the feather than the following the invention as antiasthmatic, antiallergic, heavy chain of the heavy chain of the invention has antiasthmatic, antiallergic, heavy chain of the invention has immunosuppressive. Cytostatic heavy chain of the invention has immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                            Humani nterleukin-13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the methods above in the manufacture of a medicament for the prophylaxis or treatment of a condition associated with II-13 activity. The antibody crystal and methods are useful for designing an agent that interacts with an II-13 polypeptide. The agent is useful for treating an II-13 condition chosen from allergic asthma or nonallergic asthma, cancer, airway inflammation, eosinophilia, fibrosis, excess mucus production, inflammatory condition of the skin, gastrointestinal organs, blood vessels or connective tissue, and an autoimmune condition of the skin, gastrointestinal organs, blood vessels, or connective tissue, chronic obstructive pulmonary disorder, cystic fibrosis, pulmonary fibrosis, allergic rhinitis, atopic dermatitis, inflammatory bowel disease, Crohn's disease, Cirrhosis, scleroderma, or Hodgkin's lymphoma. The present sequence is the human IL-13 alpha receptor protein.
                                                                                                                                                                                                       immunosuppressive; immune disorder; inflammatory bowel disease; antiinflammatory; gastrointestinal-gen.; gastrointestinal disea inflammation; allergic rhinitis; antiallergic; ear, nose, throa

                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an antibody, or its antigen-binding, that binds CC to interleukin (IL)-13. Also described are: a pharmaceutical composition CC comprising the antibody, or its antigen-binding fragment above and a CC pharmaceutical carrier; a nucleic acid that comprises a sequence that CC encodes a polypeptide that comprises a heavy chain immunoglobulin variable region or a light chain immunoglobulin variable region described CC above; a host cell comprising a nucleic acid sequence that encodes the classified of the antibody; treating an IL-13-associated disorder; and detecting the CC antibody; treating an IL-13-associated disorder; and detecting the CC essence of IL-13 in a sample. The antibody; composition, and method are CC disorder of associated disorders, atopic disorders, chronic obstructive pulmonary disease (COPP), conditions involving airway inflammation, CC conditions, autoimmune conditions, tumors or cancers, viral infection, CC suppression of expression of protective type 1 immune responses, allergic crininitis, or inflammatory bowel disease. This is the amino acid sequence of a polypeptide associated with anti-IL-13-antibodies of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel antibodies that function as interleukin 13 receptor alpha-1 chain (II-13R alpha-1) antagonists and can be used for treating certain conditions induced by II-13. Specifically, it refers to antibodies that bind to II-13R alpha-1 and inhibit or modulate II-13 and II-4 induced signalling. II-13 is a mediator in the immunostimulatory system, such that it is involved in the induction of IgE, IgG4 and Thelper cells and accordingly is implicated in conditions from anaphylaxis to hay fever and asthma. As such, the present invention describes these novel antibodies as antiinflammatory, cytostatic, antiulcer, dermatological, antiallergic and antiasthmatic. The methods and compositions are useful for treating various disorders including fibrosis, hodgkin's disease, ulcerative colitis, scleroderma, allergic relations and chronic obstructive pulmonary in the procession of the pro

interleukin (II)-13 and/or II-4 in the presence of II-4 Ralpha. The invention also relates to a method of treatment of a disease in which II-13 and II-4 cause adverse effects. The method is useful for treating a disease in which II-13 and II-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha (II-13 Ralpha) mutant protein. Note: This sequence is not shown in the specification, however it is constructed based on human II-13 Ralpha protein shown as SEQ ID NO:9 in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating a disease in which interleukin (IL)-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asti or AIDS, comprises administering a polypeptide or soluble polypeptide.
                                                                                                                                                                                                                                                                                          The invention relates to polypeptides capable of binding human interleukin (IL)-13 and/or IL-4 in the presence of IL-4 Ralpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 13-DEC-1996;

Zalpha proteins are useful for CC inhibiting or antagonising the ligand activity-induced proliferation of CC haematopoletic cells and haematopoletic cell progenitors preferably CC Zalpha is useful for treating immune and inflammatory disorders, for CC zalpha is useful for treating immune and inflammatory disorders, for CC zalpha is useful for treating immune and inflammatory disorders, for CC immune response in a mammal exposed to an antigen or pathogen. Zalpha is CC useful for treating diseases that require immune regulation including CC useful for treating diseases that require immune regulation including CC autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, CC asthma, ulcerative colitis, inflammatory bowel disease, Crohn's disease, CC sepsis, viral infection (dengue virus infection) and cancer. The present Sequence is human soluble cytokine IL-13 receptor alphal (IL-13RA1) correction related to the invention

Highest levels in heart, liver, skeletal muscle and ovary; lowest levels in brain, lung and kidney. Also found in B-cells, T-cells and endothelial cells. DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Binds IL13 with a low affinity. Together with IL4R-alpha can form a functional receptor for IL13. Also serves as an alternate accessory protein to the common cytokine receptor gamma chain for IL4 signaling, but cannot replace the function of gamma c in allowing enhanced IL2 binding activity.

-!- SUBUNIT: Interleukin 13 receptor is a complex of IL4R, IL13RA1, and possibly other components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- SIMILARITY: Belongs to the type I cytokine receptor family. -!- SUBCELLUIAR LOCATION: Membrane; single-pass type I membrane
protein (By similarity).
-!- DOMAIN: The WSXWS motif appears to be necessary for proper protein
folding and thereby efficient intracellular transport and cell-
surface receptor binding (By similarity).
-!- DOMAIN: The box I motif is required for JAK interaction and/or

-!- DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).
-!- DOMAIN: The box I motif is required for JAK interaction and/or activation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           207 KDNAGKIKPSFNIVPLTSRVKPDPPHIKNLSFHNDDLYVQWENPQNFISRCLFYEVEVNN
